

APPSTREAM ACCESS GUIDE

Contents

1. Requirements	2
2. Access to apps.....	2
3. Tools menu	5
4. Transfer files	9

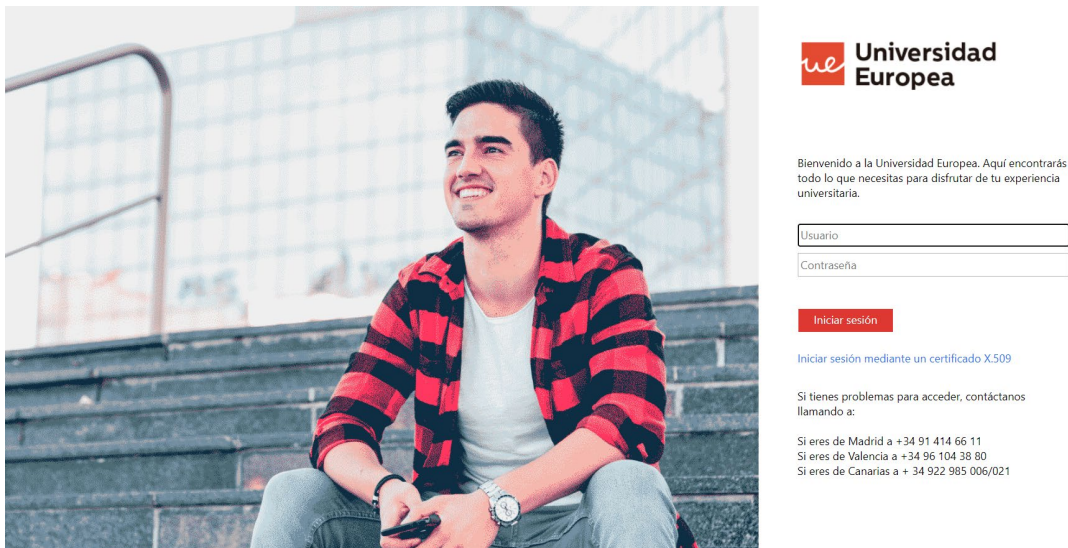

1. Requirements

You can connect to AppStream 2.0 from any location using an HTML5-compatible web browser. Supported browsers include the following:

- Google Chrome
- Mozilla Firefox
- Safari
- Microsoft Edge
- Microsoft Internet Explorer version 11 or later

2. Access to apps

We select the model you want to enter and redirect us to the access portal.

We enter our credentials.

We will see a window with a list of available models that have been assigned to our user. We must choose the model with which we access the URL, for example, if the access URL has been for the Arq_G_01 model, we must choose ADFS-Arq_G_01. If we select another model, we'll get an error.

Click sign in

- ☒ **ADFS-Arq_G_01**
- ☐ **ADFS-Arq_NG_01**
- ☐ **ADFS-Cic_G_01**
- ☐ **ADFS-Cic_NG_01**
- ☐ **ADFS-Ind_G_01**
- ☐ **ADFS-Ind_NG_01**
- ☐ **ADFS-Inf_G_01**
- ☐ **ADFS-Inf_NG_01**
- ☐ **ADFS-Mstr_G_01**
- ☐ **ADFS-Mstr_NG_01**
- ☐ **ADFS-Mstr_NG_02**

Iniciar sesión

Next, we'll see the apps we have published for this environment mock-up.

Choose your app to get started

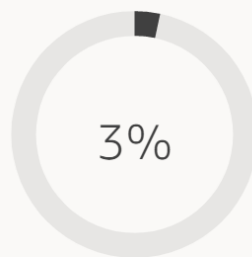

Universidad Europea - Arquitectura Grafica 01

© Powered by Amazon AppStream 2.0

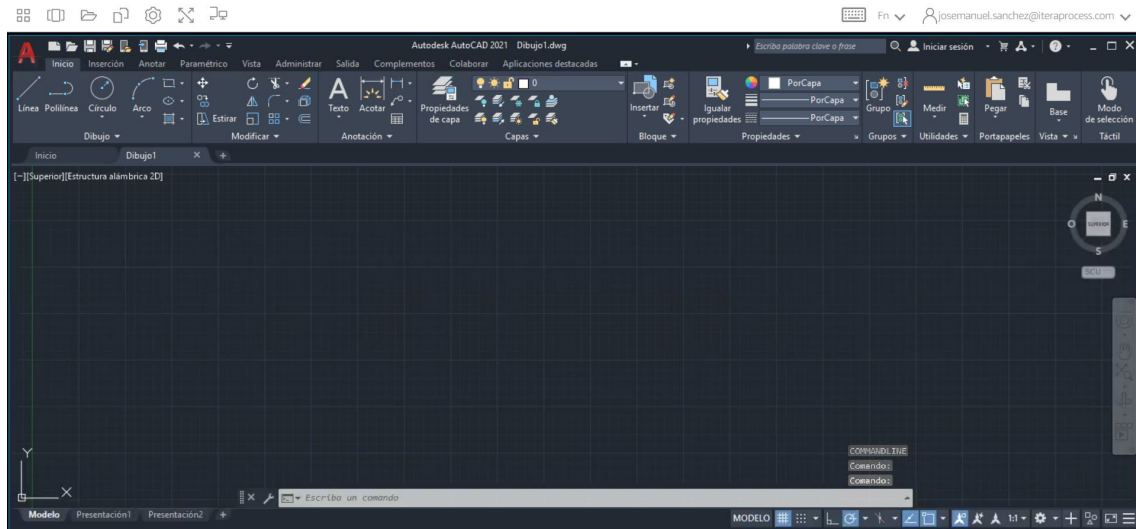

We click for example on AutoCad 2021.

We see a window like this, in which the Appstream service is provisioning the instance for execution.

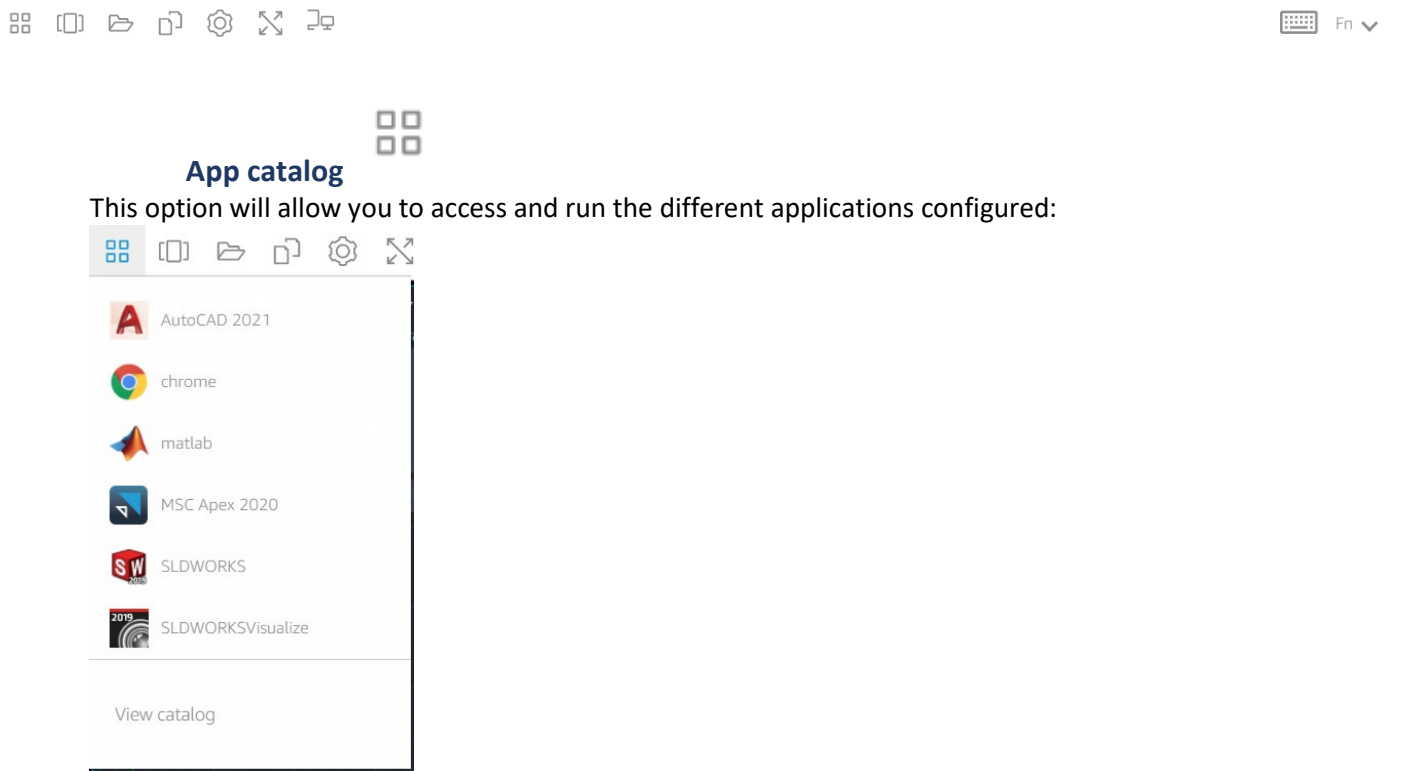

Your session is being prepared. The session should be available in less than 01:56

Then the app will open

3. Tools menu

We will briefly explain the different options of the tool menu:

Switch Windows

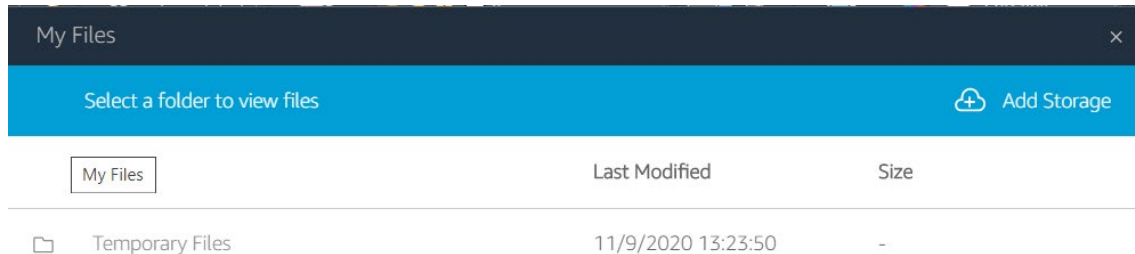

It allows us to switch between the applications that we have running from our catalog:

Access to storage

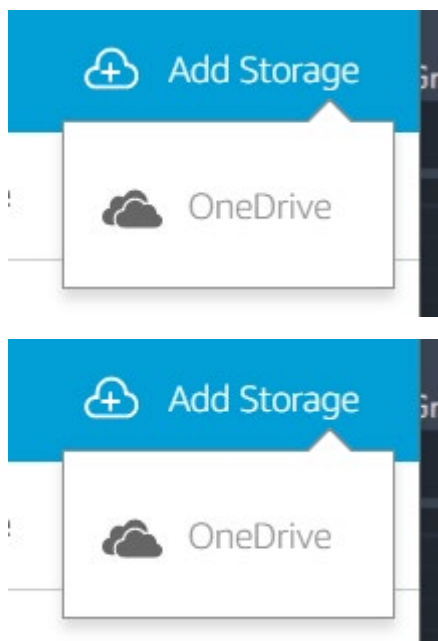

From this option we will access the storage resources configured for users.

With this tool it will allow you to log in to your One drive account.

Click on Add Storage

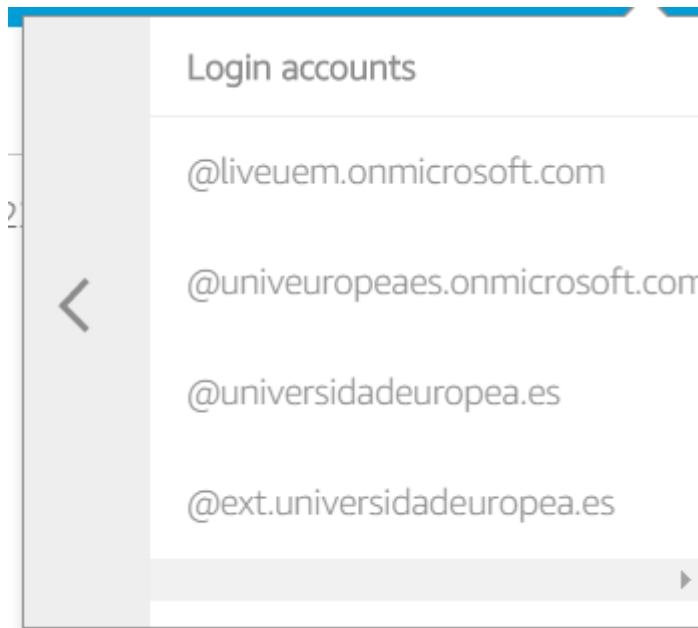

Then click on OneDrive

We select the domain of our OneDrive account.

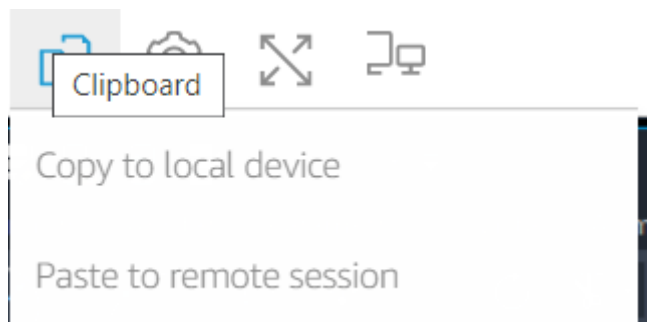

If the domain does not appear, please indicate it to configure that domain in the Appstream service.

Then a window opens where you can log in.

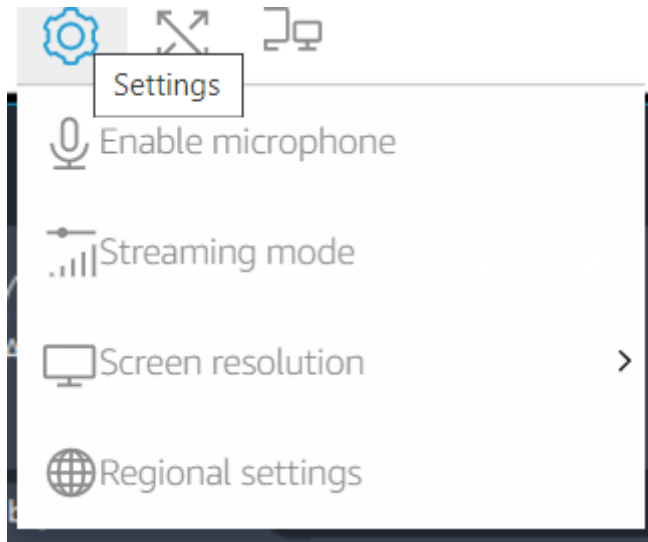

Clipboard

It will allow you to copy and paste from your machine into the application.

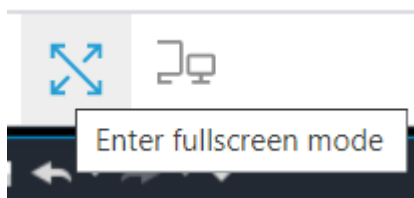

Settings

It will allow you to make different settings such as enabling the microphone, modifying the resolution of the window and modifying the locales.

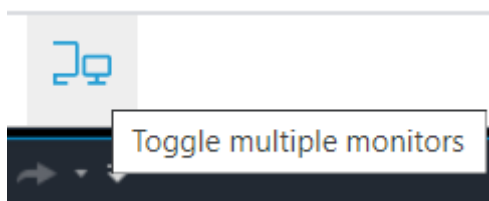

Full Screen

It allows us to modify the browser window to full screen mode.

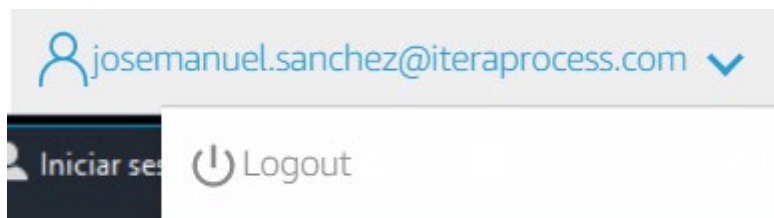

Dual monitor mode

It's going to allow us to set up two monitors.

To log out, click on the user's name and then Logout

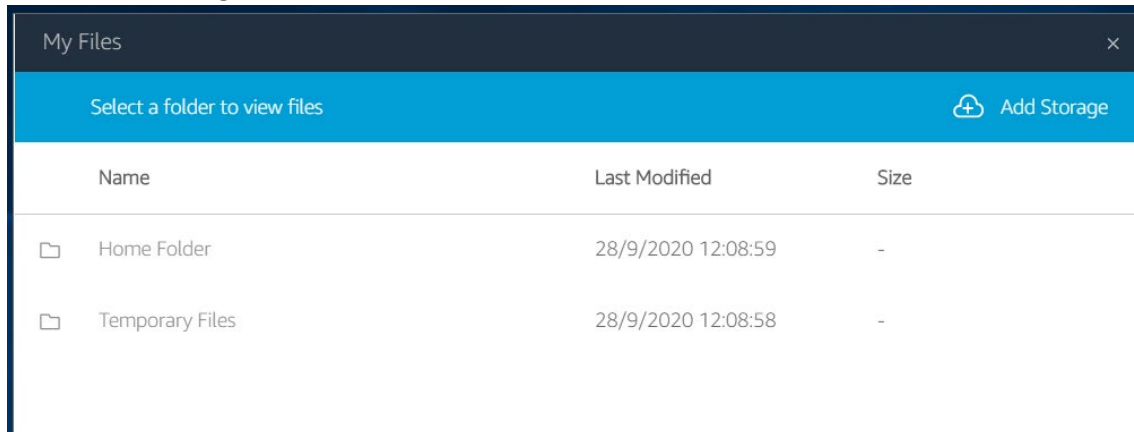

4. Transfer files

Para transferir archivos entre la instancia y el equipo local debemos configurar nuestra cuenta de OneDrive.

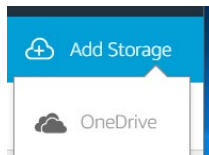

To do this, from the My Files button

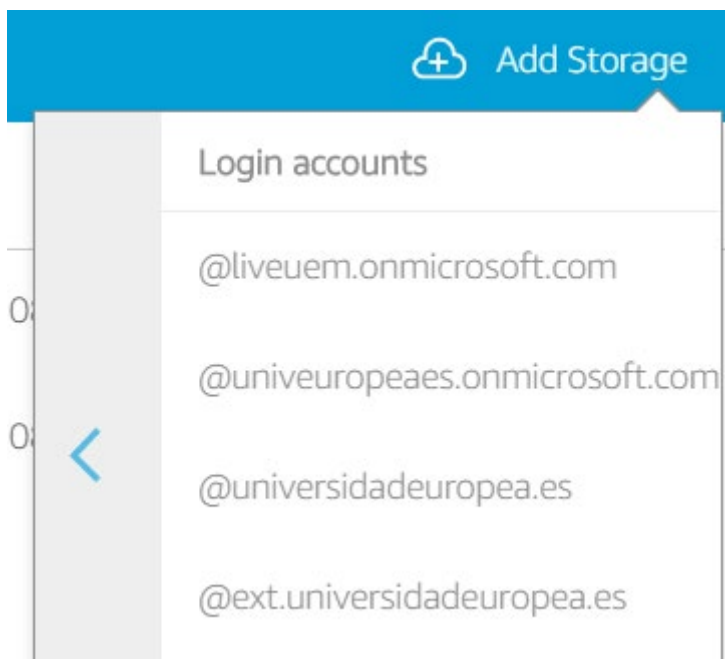

Next in Add Storage

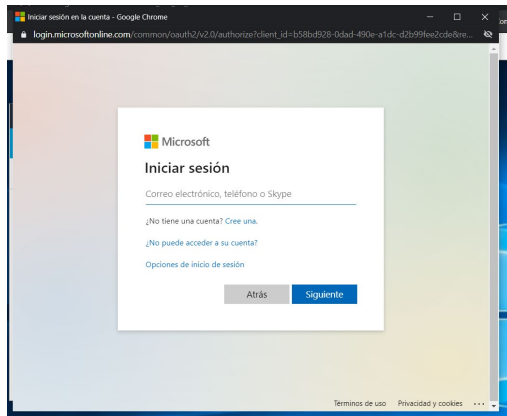

Select OneDrive

We must select our domain

And we will see a window where we will have to log in

Asks if we want to give permission. We indicate “yes”

AA

¿Permites el acceso a tu información?

appstream2.eu-west-1.aws.amazon.com

Amazon AppStream2.0 necesita tu permiso para:

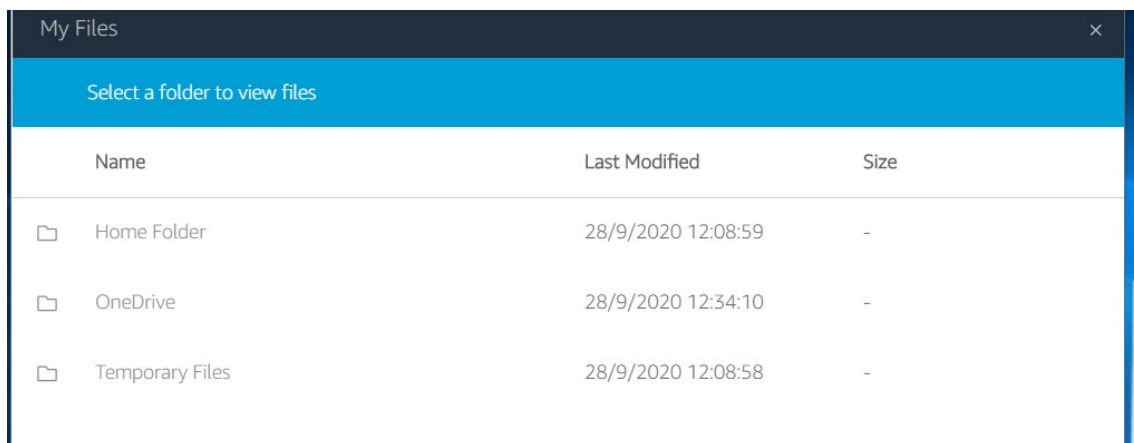

- Leer tu perfil**
Amazon AppStream2.0 podrá leer tu perfil.
- Tener acceso completo a todos los archivos a los accedes**
Amazon AppStream2.0 podrá leer, crear, actualizar y eliminar todos los archivos a los que puedas acceder.
- Mantener el acceso a los datos a los que se ha concedido acceso a Amazon AppStream2.0**
Permite que Amazon AppStream2.0 vea y actualice los datos a los que se le ha concedido acceso aunque no se esté usando la aplicación. Esto no le concede a Amazon AppStream2.0 ningún permiso adicional.

La aceptación de estos permisos implica que permite a esta aplicación usar sus datos, tal y como se especifica en las condiciones de servicio y la declaración de privacidad. **El publicador no ha proporcionado ningún vínculo a sus condiciones para que se puedan consultar.** Estos permisos se pueden cambiar en <https://microsoft.com/consent>. [Mostrar detalles](#)

No

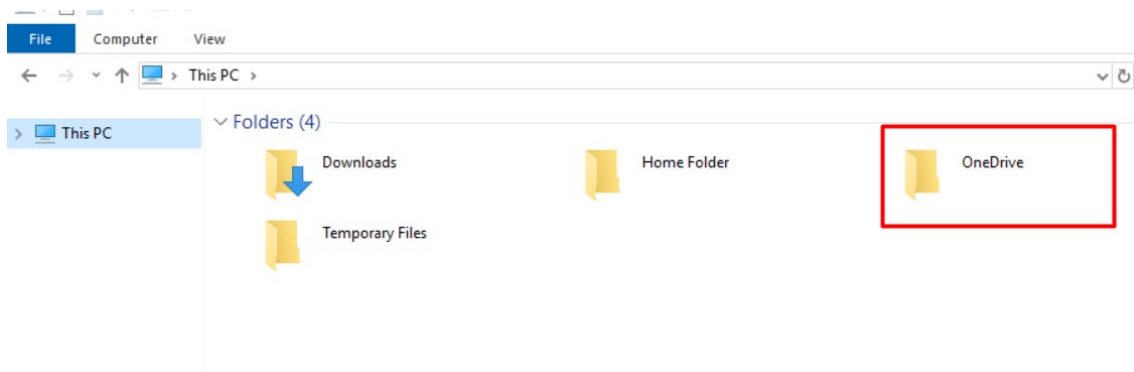

Sí

This step adds a folder called OneDrive.

Name	Last Modified	Size
Home Folder	28/9/2020 12:08:59	-
OneDrive	28/9/2020 12:34:10	-
Temporary Files	28/9/2020 12:08:58	-

This folder will be accessible from Computer

Any files that are stored in the OneDrive folder will be uploaded to the user's OneDrive account.

In the following example we can see how when you create a text file inside OneDrive, it is replicated to the account.
